

MEP BIM Key Roles & LOD Reference

LUA BIM LABS Starter - Track 1 Quick Reference | Track completion card - Day 07

BIM Roles Reference	
Role	Primary Responsibility
BIM Manager	Sets BIM standards, manages the CDE, reviews model quality across the project
BIM Coordinator	Runs clash detection and coordination, manages issue tracker, leads coordination meetings
MEP BIM Modeler	Creates and maintains discipline-specific BIM models (HVAC, piping, electrical, etc.)
BIM Lead	Owns the BEP, monitors delivery milestones, mentors the modeling team
MEP Engineer	Provides design intent and engineering decisions, approves coordination changes
Client / Developer	Sets BIM requirements via the EIR; defines deliverables and acceptance criteria

LOD Definitions			
LOD	Name	Description	MEP Example
LOD 100	Concept	Overall size and location indicated - not measurable	Schematic duct zone marked on floor plan
LOD 200	Approximate	Approximate geometry, size, shape, and location	Duct routing with approximate size and elevation
LOD 300	Precise	Accurate geometry, confirmed dimensions, connections	Duct with correct size, elevation, system assignment
LOD 350	Coordination	All elements needed for coordination, including supports	Duct with hangers, clash-checked against all disciplines
LOD 400	Fabrication	Full shop-drawing level detail for manufacturing	Duct sections with flanges, supports, installation tolerances
LOD 500	As-Built	Verified field conditions - record model	Duct as actually installed, deviations from design captured

Key Acronyms		
Acronym	Full Form	What It Means in Practice
BEP	BIM Execution Plan	Project document written by the team defining who delivers what model content, when, and how
EIR	Employer's Information Requirements	Client-defined document specifying BIM deliverables and standards for the project
CDE	Common Data Environment	Shared digital platform where all project models and documents are stored and managed
IFC	Industry Foundation Classes	Open, non-proprietary file format for sharing BIM data between different software platforms
NWC	Navisworks Cache	Lightweight model export from Revit used for Navisworks clash detection and review

NWD	Navisworks Document	Packaged project file bundling multiple NWC models for sharing and archive
RFI	Request for Information	Formal query raised when site conditions differ from the model or drawings
